ABOUT ME

I'm an interface designer and frontend developer in love with the Web, technologies, making music, taking photos, and riding fixed-gear bicycles.

I started in 2013 by developing my blog, and since then, I've created a lot of stuff, including personal web pages, useful instruments and tools, plugins for Figma and Sketch, blogs, 3D widgets for visualizing data, and design systems. I've tried a variety of JavaScript frameworks and libraries (React, Vue, Node.js, etc.). I went through the entire process of developing the idea, from designing to deploying and supporting Linux servers.

2019 - PRESENT

UI/UX DESIGNER & FRONT-END DEVELOPER AT TRINETIX

- Developed a design system on React with more than 80 components written from scratch according to accessibility standards.
- Provided rapid prototypes for user testing, facilitating an iterative design process.
- Assisted designers in bridging communication with developers.
- Conducted workshops for the design team to introduce new tools, and web features
- Created tools to streamline the design process and enhance the productivity of designers.

- Created plugins with AI integration for Figma to enhance the design process.
- Participated in creating designs for complex enterprise systems.
- Developed projects on Three.js for 3D data visualization.
